

## Final Recommendation

 **Adobe** should acquire  **Figma** at an EV/Revenue Multiple between **15x – 17.x** or **\$35-\$40** per share

### Acquisition Thesis

1. After the fall of AdobeXD, Adobe is missing a desktop creative tool allowing for cloud-native collaboration which is where design teams are shifting towards rapidly
2. Figma strengthens Adobe's position at the center of the design-to-development workflow while pushing beyond Adobe's traditional "creative-only" user base
3. Figma's collaborative canvas and user engagement data gives Adobe a direct channel to embed Firefly and other AI-native tools that Figma currently lacks rather than its current standalone

#### Revenue Synergies

- **Cross-sale:** Bundle Figma with Creative Cloud and Adobe Express to buff subscription
- **Marketing:** Use current Adobe users and marketing to promote the use of Figma in sub bundles
- **AI Monetization:** Blend Firefly AI into Figma to allow for higher bundle pricing and drive ARR
- **Data:** Use Figma's current usage data to market SaaS platforms to drive revenue and promote new services to lower paying collaborative users

#### Cost Synergies

- **Cloud consolidation:** Switch Figma's cloud hosting and data infrastructure to Adobe's existing
- **G&A and R&D overlap:** Eliminate redundant public company costs and consolidate overlapping investment in the search for similar features, especially in the AI race
- **Marketing:** Lower costs by optimizing existing Adobe marketing strategy and relationships
